BMW M4 SEAT BRACKETS MOUNTING INSTRUCTIONS

- 1 First of all measure the width of your bucket seat on the bottom to know the measure between the sliders.
Face the part D with the part C using the part F, the position is very important, the widest part must go up. Before facing the second adjustable rail you must adjust the lever regarding the distance between both adjustable rails then set the lever and tighten the bolts.
- 2 Screw the part E to the part D already mounted in the part C using the part A.
- 3 Screw the stock seat belt anchor on the bracket with the part B.
- 4 Place all the set on the car and screw the Nisuba seat bracket to your car.
- 5 Finally screw your bucket seat between part E. Bolts for this are not included, this must come with the seat and in case not, normally you have to use 4 M8 Allen bolts. Make sure that all bolts are tightened and check if the part D works correctly.
